

Making good connections

GMS offers a comprehensive range of electrical services for the commercial market. We understand the implications to your business of downtime and have built our reputation on providing a quality service, often within tight deadlines, to our customers. GMS is your source for all commercial electrical design and contracting needs, whether its part of a larger project or a smaller stand alone job.

GMS services & solutions

- Equipment installation associated with mechanical systems including: chillers, boilers, HVAC units, generators, turbines, etc.
- Uninterruptible power supply (UPS) system installation, service & maintenance
- Commercial generator installation and maintenance
- Energy saving upgrades to buildings and additions
- Outlet installation
- Customized retail and tenant fit-out projects
- Outdoor lighting: parking lot, security & accent
- Commercial electrical design, installation & repair

Why GMS?

- GMS has a proven track record in electrical installation and repair services.
- GMS has an experienced team of "fully tooled" technicians on staff that are highly valued by our customers for their skill levels, efficiency and expertise.
- GMS is reliable, honest and upfront with our pricing – no hidden costs.

Congressional Federal Credit Union (CFCU) – Disaster Recovery Site

The CFCU is a financial institution that serves employees of the House as well as over 100 other corporate partners and associations.

After successfully installing a data center cooling solution at the CFCU Headquarters Building, GMS was asked to provide additional electrical services at their *Disaster Recovery* site in Beltsville, Maryland. The existing flow switch in the glycol loop wasn't operating correctly, which could ultimately impact data center operations and jeopardize the equipment. GMS replaced the existing flow switch to allow for more accurate and reliable control of the pumps. Additionally, GMS fabricated and delivered two 8' whip extensions with the 20 amp twist lock plugs and receptacles. These extensions allowed access to the existing whips without having to go through the PDU breaker panel.

Did you know?

GMS maintains a leading position as a provider of mission-critical infrastructure solutions and services nationwide.

Did you know?

GMS has been delivering quality HVAC, electrical, plumbing and mechanical infrastructure solutions since 1998.

Advantages of maintenance

- Systems and equipment last longer
- Fewer costly repairs
